CLIENT HANDOVER DOCUMENT

Bag-E-Rahmat Holdings ERP

System Handover & User Guide

Prepared by Nexovia IT

Prepared for Bag-E-Rahmat Holdings Ltd.

Date October 7, 2026

CONFIDENTIAL — FOR INTERNAL USE BY BAG-E-RAHMAT HOLDINGS

1. Introduction

The Bag-E-Rahmat Holdings ERP is a single system that replaces spreadsheets, paper registers, and scattered WhatsApp messages for running the company's construction projects day to day.

In one place, it tracks:

- Every project's daily material and labor activity
- Revenue, expenses, and owner payments
- Shareholder ownership and nominee representation
- Project documents, RAJUK paperwork, and approvals
- Live CCTV from every site
- Internal team chat per project
- Company-wide job applications and personal property records

Everyone — from site staff to company owners — uses the same system, but each person only sees and does what their role allows.

2. Getting Started

Open the app in a browser and sign in with the email and password given to you. There is no separate "customer" vs "staff" app — one login takes you to the screens your role is allowed to see.

Each account has one of five roles:

Role	Who it's for	What they can generally do
Super Admin	Company ownership / top management	Everything — the only role that can approve share transfers, approve nominees, and approve property sell/development requests
Admin	Day-to-day management	Almost everything Super Admin can, except the most sensitive approvals above
Manager	Oversight staff	Limited view across projects, CCTV, and can submit requests
User	Project / site staff	Works inside assigned projects — daily log, financials, documents, reports
Nominee	A shareholder's representative	View-only access to the project(s) tied to the shareholder they represent

If you can't see a menu item or get a "permission denied" message, it means your role isn't set up for that area — contact a Super Admin to review your access under Administration → Roles & Permissions.

3. Projects & Daily Log

Projects is the starting point — every piece of site, financial, and document data belongs to a project. Open a project to see its own set of tabs (Dashboard, Revenue, Expenses, Daily Log, Chat, Shareholders, Documents, RAJUK, CCTV, Reports, and more, depending on your role).

The **Daily Log** tab is where site activity is recorded each day, in this order:

1. **Material In/Out** — materials received or used, including transportation and carrying cost
2. **Labor** — daily labor entries and cost
3. **Stock Levels** — running material stock, calculated automatically from the entries above
4. **Full Timeline** — a combined day-by-day history

Any entry can be deleted (with a confirmation prompt) if it was added by mistake.

4. Financials & Shareholders

Revenue and **Expenses** tabs record money in and out of a project, with a receipt attached to each entry. **Owner Payments** (visible to Admin and Super Admin only) tracks distributions paid out to owners.

The **Shareholders** tab shows each shareholder's ownership percentage and calculated share value. A shareholder can have one or more **Nominees** — people who represent them (e.g. a family member) with their own login. A nominee sees the full project data plus their own calculated slice (e.g. "Your 5% share: ৳X"), and a Super Admin must approve a nominee before their login becomes active.

Share ownership itself only changes through an approved **Share Transfer / Sell** request (see Section 8) — nobody edits ownership percentages directly.

5. Documents & RAJUK

The **Documents** tab stores general project files — contracts, drawings, permits — organized by type, viewable in-app without downloading.

The **RAJUK** tab is a dedicated space for RAJUK-related paperwork, split into three categories: **Approval**, **Drawing**, and **Photo** (which supports uploading several photos at once). Only Admins and Super Admins can upload or delete RAJUK files; regular users and nominees can view them.

6. CCTV Live Monitoring

Live Monitoring shows camera feeds from every site in one screen, with a grid view (1, 4, 9, 16, 32, or 64 cameras at once) and a filter to focus on a single project. An online/offline counter at the top

shows device health at a glance. Access is controlled per role — most roles can at least view live cameras, with device setup and management restricted to Admin and Super Admin.

7. Reports & Chat

The **Reports** tab summarizes a project's activity (materials, labor, costs) and exports it as **CSV** or a branded **PDF** — useful for sharing with people outside the system.

The **Chat** tab is internal messaging scoped to each project: direct messages and group chats between assigned team members, with read receipts, typing indicators, and voice/video calling for quick coordination without leaving the app.

8. Self-Service Features

Three areas let people submit requests directly in the system instead of going through paperwork or outside channels — every one of them is reviewed and approved from Administration, never applied automatically:

Feature	Where	What it's for	Who approves
Job Application	Sidebar (company-wide)	Apply for an open position with CV, photo, and certificate	Admin or Super Admin (shortlist → approve/reject)
My Property	Sidebar (personal)	Record your own property with supporting documents; request to sell it or offer it to the company for development	Super Admin only
Apply for Others	Inside a project	Request a share transfer or sale, or request a NOC (No Objection Certificate)	Super Admin only — approving a transfer/sell immediately updates real ownership records

Your own submissions and their status (pending, shortlisted, approved, rejected) are always visible to you from the same page you submitted them.

9. Administration Panel

Visible to Admin and Super Admin only. Open any page under **Administration** in the sidebar, then use the tab strip across the top to move between:

- **User Accounts** — create, edit, deactivate users
- **Project Access** — assign which users can see which projects
- **Roles & Permissions** — see and adjust what each role can do

- **Nominees**, **Applications**, **Job Applications**, **Properties** — review and approve the self-service requests from Section 8
- **General Branding** — company name, logo, favicon
- **Activity Log** — a record of who did what and when

This tab strip is the one place all administrative tools live — there's no separate menu for each.

10. Frequently Asked Questions

I forgot my password — what do I do?
Ask a Super Admin or Admin to reset it from Administration → User Accounts and give you a temporary password.

Why can't I see a menu item or tab that someone else has?
Menus and tabs are role-based — you only see what your role has permission for. Ask a Super Admin to review your access under Roles & Permissions.

How do I add a new employee or give them project access?
A Super Admin or Admin creates the account under User Accounts, then assigns them to specific projects under Project Access.

I deleted a material/labor entry by mistake — can it be undone?
The system asks for confirmation before any delete to prevent accidents. Once confirmed, it cannot be restored from within the app — re-enter it, or contact support if it was a significant entry.

How is a nominee's share calculated?
Automatically, from the shareholder's ownership percentage × the nominee's assigned percentage of that shareholder's stake. A nominee always sees the shareholder's full figures plus their own calculated slice.

I submitted a request (share transfer, NOC, job application, property sell) — what happens next?
It sits as "pending" until a Super Admin reviews it from Administration. You'll see the status change (approved/rejected) on the same page where you submitted it — there's no separate notification email.

Who can see Owner Payments?
Only Admin and Super Admin. Regular users and nominees don't have access to this tab.

Can I use this on my phone?
Yes — the interface adapts to mobile browsers. No separate app install is needed.

Is there a light mode?

Yes, toggle it from the sun/moon icon in the top header; the choice is remembered per device.

A CCTV camera shows offline — is that a system problem?

Usually not — it means the camera/DVR itself lost power or network connection on-site. Check the physical device and its internet connection first.

Is the data backed up and secure?

Yes — the system runs on a private server with regular backups, and every page requires a login; access is further restricted by role as described in Section 2.

11. Support & Contact

For bugs, access issues, or feature requests, contact **Nexovia IT** — nexoviait.com, the developer of this system.
